

Sprint #2 Report - 5/5/2019

Retrospective

Actions to stop doing:

1. Assigning a lot of points for the overall sprint
2. Less emphasis on testing, focus on logic more in the code review

Actions to start doing:

1. Go outside of your development “specialities”
2. Add UI components as separate tasks
3. Log whenever doing user experiences

Actions to keep doing:

1. Daniel and Donovan being awesome

Work Overview

Completed

All user stories.

Some notes: User story 1 was meant for integration with the CE team sensor package. However, they had to upgrade a bluetooth chip. We used dummy data manually collected and tested to ensure it was working. We still need to formally verify the connection works with their bluetooth chip.

Additionally, we opted to do less testing. We are focussing more on engineering and code review, so user story 3 switched more to an improvements branch. This was because the code review for the rewrite in sprint 1 did not have enough time for feedback.

Not Completed

None. See above for more information.

Work Rate

Tasks backlogged: None

We averaged 5.5 task points a day, but with a heavy bias towards the end of the sprint. Additionally, this sprint we did 1.8x the work we did in Sprint 1.

Sprint 2 - Burndown Chart
