

Binnacle

Release 2.0 Plan

March 17 2019

High Level Goals

This release will consist of a few separate goals, building on our success in the first release. While the foundation of the app is in a great place, the UX needs some attention, we want the app to look just as good as it works under the hood. Second goal is bluetooth communication with the CE team's sensor package and integrating their much more accurate data with the route planning algorithm. Third, we will be adding data points to our algorithm for better and more accurate route planning. Finally, we want to write the algorithm so that it can be executed on the phone.

Backlog High Level Goals

- Add a calibration phase for the CE team's sensor package

- Calculate more advanced routes, not just A to B. Something like [this](http://portbusan.go.kr/eng/img/new/page_yacht_03_a.gif)
